Detail Technical Specification anyLogistix (Supply Chain Software)

Quantity: 25 user

anyLogistix is a supply chain optimization software that leverages advanced simulation and analytical capabilities to design, analyze, and optimize complex supply networks. By providing a user-friendly platform for modeling various scenarios, including demand fluctuations, capacity constraints, and transportation costs, anyLogistix enables businesses to identify and implement significant cost savings while improving service levels and operational efficiency. Its flexible customization options allow for the creation of tailored models that accurately reflect unique business requirements, including specific constraints and objectives, making it ideal for strategic planning and operational decision-making across the entire supply chain.

Core Functionality:

- Supply chain network design: Visual mapping and modeling of entire supply chain networks, including facilities, transportation routes, and inventory levels.
- Simulation capabilities: Ability to run various "what-if" scenarios to evaluate different supply chain strategies under changing market conditions.
- Optimization algorithms: Advanced optimization tools to identify the most efficient network configuration based on cost, lead time, and service level targets.
- Data analysis and reporting: Comprehensive dashboards and reports to track key performance indicators (KPIs)

Specification
1. Setting Up a Green Field Analysis: Determine the optimal location for new distribution centers to minimize transportation costs.
2. Network Optimization: Optimize the entire supply chain network to improve efficiency and reduce costs.
3. Simulation: Analyze the dynamic performance of the supply chain and observe behaviors over time.
4. Variation: Evaluate the impact of different supply chain parameters and scenarios on performance.
5. Risk Analysis: Assess the impact of disruptions (e.g., strikes, fires) on supply chain performance and identify mitigation strategies.
6. Comparison: Compare KPIs and statistics of different supply chain scenarios to determine the best configuration.
7. Safety Stock Estimation: Calculate the necessary safety stock levels to maintain service levels during demand fluctuations.
8. Production and Sourcing Policy: Optimize production schedules and sourcing policies to meet customer demands efficiently.
9. Inventory Control Policy: Test different inventory control policies to minimize costs while meeting service levels.
10. Transportation Network Optimization: Optimize transportation routes and policies to reduce costs and improve delivery times.

and identify bottlenecks.
